--	---

Relevant Courses:

AI Foundation	AI Systems Designs	Web Interface Design
Unix/Linux OS	C # Programming	Java Programming
Software Requirements Engineering	Web Application Development	Client-Side Web Development

ACADEMIC PROJECTS

Restaurant Website - Online Ordering Platform | HTML/CSS, JavaScript

- Designed and developed a responsive, user-oriented web application for a restaurant to showcase menus and process digital dish orders
- Built interactive features: scrolling image gallery, contact forms, client-side form validation using JavaScript
- Used CSS media queries to ensure functional cross-device performance and mobile responsiveness across major web browsers

Pet Rescue & Adoption Platform - Requirements Document | Software Requirements, Agile

- Collaborated in an Agile student team to create a Software Requirements Specification (SRS) document for an animal shelter and adoption platform
- Defined functional and non-functional requirements and created complex UML structural diagrams to clearly display system architecture

Retail Inventory Database System | SQL, Database Concepts

- Co-developed an SQL relational database enabling retail store managers to update, retrieve, and track inventory across multiple departments
- Served as Team Lead for a group of 3, managing tasks and assignments, tracking project milestones, and managing quality assurance testing
